requirements**

**Increase network
coverage**

**Reduction of
CO2 emissions**

ABOUT TELECOM OFF-GRID FACILITIES

Following the emerging concept of green telecommunication networks, the realization of powering the sites using sustainable solutions. Our solution enables telecom, construction, and other industries to face the challenges of off-grid locations either permanently or temporarily. Our arrangement is an essential requirement when powering off-grid base stations to ensure that mobile users and telecom operators do not experience any service outages at low cost and minimal O&M requirements.
